AI Engineer Core Track: LLM
Engineering, RAG, QLoRA, Agents
The AI Engineer Course 2025:
Complete AI Engineer Bootcamp

Sami Andoni

Senior Software & AI Engineer | LLMs & Generative AI | Technical
Project Manager | Entrepreneur
Palestinian Authority

Summary

With a strong foundation in software development and technical project management, I made a bold career shift to pursue my passion for health-conscious food trading. Stepping away from tech, I built and scaled businesses in import, retail, restaurants, and bakeries, bringing high-quality, nutritious food to market. This journey sharpened my skills in business strategy, supply chain logistics, and market expansion, complementing my technical expertise.

Along the way, I also self-learned AI engineering through online courses, gaining a solid understanding of the current AI landscape and hands-on skills in prompt engineering, large language models (LLMs), and generative AI. This continuous learning bridges my technical background with cutting-edge innovation.

Now, as I re-engage with the tech industry, I bring a unique blend of entrepreneurial mindset, cross-functional leadership, and problem-solving skills. Whether driving complex software programs, advancing AI-driven solutions, or managing business operations, I thrive in fast-paced, impact-driven environments.

Core Strengths:

Technical Program & Product Management

Software Development & Scalable Architecture

AI Engineering (Prompt Engineering, LLMs & Generative AI)

Business Strategy & Market Expansion

Supply Chain & Operations Management

Cross-functional Leadership & Execution

I'm passionate about innovation, scalability, and creating value-driven solutions—whether in technology, AI, or business. Excited to explore opportunities that leverage my diverse expertise!

Experience

Freelance

AI Engineer / Consultant

June 2025 - Present (7 months)

Ramallah, West Bank

I help businesses turn AI from buzzword to workflow. My focus is on building generative AI systems, LLM-based assistants, and data automation pipelines that make products smarter and teams more efficient.

I've designed and deployed custom GPTs, LangChain agents, and AI-powered chatbots integrated with APIs, CRMs, and e-commerce platforms — always with an eye on usability, scalability, and real impact.

My role blends engineering, strategy, and creativity — consulting on AI adoption, crafting intelligent prototypes, and translating complex technology into solutions that actually work.

525K

Technical Project Manager

March 2025 - May 2025 (3 months)

Ramallah, West Bank

As a Technical Project Manager, I bridged the gap between engineering, product, and business teams to drive the successful execution of complex technical initiatives. I specialized in delivering scalable solutions, optimizing workflows, and ensuring cross-functional alignment for high-impact projects.

Self-employed

Freelance Software Engineer

June 2016 - December 2020 (4 years 7 months)

Ramallah, West Bank

Engaging in various independent projects from websites to mobile applications and system programming, handling all aspect of the projects' cycle. Noticeable clients being AM Qattan Foundation (Ramallah), The Palestinian Museum (Birzeit), Arab Millionaire (Remote).

Groopie

Software Architect

April 2013 - May 2016 (3 years 2 months)

West Hollywood, California, United States

Groopie was a video sharing social app startup, based in LA, California.

As a Software Architect at Groopie, I played a key role in designing and building scalable, high-performance systems that powered the platform. My focus was on architecting robust backend solutions, optimizing system performance, and ensuring seamless user experiences.

Key Responsibilities:

- Designed and implemented scalable, cloud-based architectures to support Groopie's growth.
- Led backend development and system integration, ensuring high availability and reliability.
- Defined technical roadmaps, aligning software solutions with business objectives.
- Collaborated with cross-functional teams to enhance security, performance, and user experience.
- Provided mentorship and guidance to developers, promoting best practices in software engineering.

Key Achievements:

- Optimized system performance, improving speed and efficiency by over 50%.
- Increased system reliability to have the service uptime near 99.9%.
- Prepared multiple MVP demos with investors, which helped the startup in 3 successful fundings.
- Optimized the team's roles to align with our needs maximizing the throughput capacity.

Zeva Incorporated

Software Engineer

May 2011 - April 2013 (2 years)

Bethlehem, West Bank

As a Software Engineer at Zeva, a leading software security company in the USA, I contributed to the development of cutting-edge security solutions designed to protect organizations from cyber threats. Working in a fully remote environment, I collaborated with cross-functional teams to build, optimize, and maintain secure and accurate to-the-byte software systems.

Axsos AG

Intern

September 2010 - April 2011 (8 months)

Stuttgart, Baden-Württemberg, Germany

During my internship at AXSOS AG, a leading Software-as-a-Service (SaaS) provider in Germany, I worked on designing, developing, and optimizing client-driven applications. This experience allowed me to gain hands-on exposure to industry best practices in a dynamic international environment.

Key Responsibilities:

- Assisted in the development and maintenance of SaaS applications, focusing on scalability and performance.
- Collaborated with senior engineers to implement new features and optimize existing codebases.
- Worked with cloud technologies, APIs, and microservices to enhance application functionality.
- Gained experience in Agile & Scrum methodologies, participating in daily stand-ups and sprint planning.
- Conducted bug fixes, code reviews, and performance testing to ensure software reliability.

This internship strengthened my technical skills in SaaS development, cloud computing, and team collaboration, preparing me for future challenges in software engineering.

CISCO SYSTEMS (USA) PTE. LTD

Software Engineer

August 2009 - August 2010 (1 year 1 month)

Ramallah, West Bank

At Cisco Systems, I worked on programming and optimizing network devices, contributing to the development of cutting-edge networking solutions for enterprise environments. My role focused on firmware and software development, ensuring high performance, security, and automation in Cisco's networking hardware.

G.ho.st Global Hosted Operating System

Research Development Software Engineer

March 2007 - July 2009 (2 years 5 months)

Ramallah, West Bank

At G.ho.st, a pioneering company in cloud computing and virtualization, I worked as an R&D Software Engineer, focusing on the development of next-generation web and cloud-based operating systems. My role involved researching and implementing innovative software solutions that enhanced scalability, security, and performance in a cloud-based virtual computing environment.

Key Responsibilities:

- Designed and developed core components of a cloud-based operating system, enabling seamless virtualization.
- Conducted research on distributed systems, cloud computing architectures, and web-based applications to enhance system efficiency.
- Implemented high-performance backend services and optimized cloud storage and data synchronization.
- Worked on browser-based virtualization, enabling a full computing experience on the cloud.
- Collaborated with cross-functional teams, including software architects and UI/UX designers, to develop intuitive and scalable solutions.
- Conducted performance benchmarking, debugging, and system optimization to improve speed and reliability.

Key Achievements:

- Contributed to the development of one of the first fully cloud-based virtual desktops, improving accessibility and performance.
- Enhanced desktop-cloud synchronization technologies, reducing latency and improving user experience.
- Developed scalable backend infrastructure, enabling thousands of concurrent users to access the platform seamlessly.
- Implemented security enhancements, strengthening data protection and user authentication mechanisms.

This experience solidified my expertise in cloud computing, distributed systems, and R&D-driven software innovation, allowing me to contribute to the future of virtual computing and SaaS platforms.

Birzeit University

Web Developer

August 2006 - July 2007 (1 year)

Ramallah, West Bank

My journey into software development began at Birzeit University, where I worked as a Web Developer, building and maintaining web applications to support the university's digital presence. This role provided me with hands-on experience in front-end and back-end development, database management, and user experience optimization.

Education

Birzeit University

Bachelor of Engineering - BE, Computer Engineering · (September 2002 - June 2007)

Talitha Kumi, Beit Jala

Tawjihi, Scientific · (2002)
